PETROLEUM CLEANUP

HSWENG.COM

SOLUTIONS

HSW provides the foundation for compliance, clean up and monitoring.

Cost saving techniques for remediation

Innovative technologies to streamline programs

A staff of licensed professional engineers and geologists with over 20 years of experience

Our Team

HSW has many years of experience in conducting site assessments and remediation at petroleum facilities. The HSW staff is well trained and experienced to efficiently guide projects through completion; all while maintaining compliance with cleanup directives from the Florida Department of Environmental Protection (FDEP).

Our expertise allows us to excel at performing these activities under the most challenging conditions typically found at operating retail convenience stores, as well as active bulk storage facilities. It is our goal to work with clients to develop a cleanup strategy that allows the cleanup work to proceed with minimal interruption to the daily business of active retail and non-retail facilities.

HSW can also assist property owners by providing:

- A current snap-shot of a facility's status with respect to petroleum cleanup
- Assistance in understanding State funding Caps and Deductibles (if applicable)
- Identification of potential 3rd party liability as a result of recent Notifications made by the FDEP, and a review of site conditions to determine whether funding from the FDEP can be available for contaminated media removal discovered during UST system upgrades and closures.

HSW is able to provide these services through our staff of licensed professional engineers and geologists with over 20 years of experience with petroleum cleanup, compliance and monitoring.

"... FDOT was seeking a permitting approach that would provide flexibility to implement innovative remedial technologies at a contaminated site without the delays typically associated with permit modifications...I needed a firm with an in-depth knowledge of the complexities of the regulations... HSW has demonstrated their superior qualifications in each of these areas..." **Terry Zinn, FDOT**

"...For the past ten years, I have managed numerous environmental remediation projects at Kennedy Space Center (KSC)...In doing so, I have had the opportunity to employ every environmental consulting firm...HSW did an outstanding job...[they] have correctly applied federal and state guidelines that are often confusing, and they consistently provided NASA with deliverables...of exceptional quality for submittal to the regulatory agencies..." **John F. Adkisson, NASA**

"...Since first hearing a presentation by one of HSW's principals...I have been continually impressed with the company...Each of the varied projects assigned by the city to HSW over the [past] has been completed as agreed, in a timely manner, and within (or under) the approved budget... Perhaps most impressive is the overall integrity that shines through the work of each member of the HSW team." **W.B. Turi, Environmental Compliance, City of Ocala**
